"Fortmu Ltd"

Business idea

- Fortmu Ltd [the client] is a multi-national energy company with headquarters in the Nordics.

- Fortmu is investigating new business domains through their internal business incubation department who is now ready to set up a technical PoC of a service (business application) to support their new business idea.

- Azure is the client's cloud platform of choice and Accenture has been selected as their partner to deploy the infrastructure solution.

- The timeline is short, and the client team need to have the infrastructure deployed within two weeks in order to meet the stakeholder expectations and milestones.

The request

- We need a Landing Zone in Azure to be setup and handed over to the application development team so they can proceed with their business application proof-of-concept work.

- The new application to be deployed is dependent on legacy middleware components that requires the application to be built using IaaS Windows VMs.

- The solution will need its own Landing Zone according to the following requirements:

  - LZ deployment using IaC

  - Automated VM deployment using DevOps pipelines

  - Monitoring and alerts need to be enabled

  - Server patching using native services

- The work should be structured using Azure boards

Contact information

- Client meetings 3x30min (bundled meetings)

    - Client group 1 – olli.Vierimaa@accenture.co and Mattias.sjobom@accenture.com

    - Client group 2 – Elodie.elise.s.morin@accenture.com and mathias.nyman@accenture.com

    - Client group 3 – Bjarte.mohn@accenture.com and Lars.a.a.Jensen@accenture.com

- Each client team has representants of:

    - Head of cloud infrastructure

    - Project manager for new business application PoC

Good luck!
